

College graduates considering full-time careers

As a top student in a technical discipline, you can anticipate many career opportunities as graduation approaches.

However, few of these opportunities can offer the potential impact of a career at Sandia National Laboratories. We do national security work that is beyond the scope or means of most private organizations, pushing frontiers at the edge of science and engineering in areas as diverse as cybersecurity, nuclear weapon systems, clean combustion, biotechnology, and sustainable energy.

And what we do matters. Our technologies - which make our nation safer, improve human and environmental health, and even boost the competitiveness of U.S. industry - can truly change the world.

That's why we can offer you a career that has the power to change your life. Working here, you'll join some of the top minds in the country in solving difficult challenges in **electrical engineering, mechanical engineering, computer science, and cyber security**.

In addition to working at the forefront of technology on problems of real significance, you can expect competitive pay, top-notch benefits, and a work-life balance that gives you time to enjoy family, friends, and the rich cultural, educational, and recreational opportunities that surround our sites in Albuquerque, NM, and Livermore, CA.

Take your chance to change the world - and experience the changes in your life. Submit your resume and application and learn more about the exciting work at Sandia at www.sandia.gov/careers.
